

CONDUCTOR INSTALLATION

CONDUCTOR INSTALLATION

Wagenborg Foxdrill can provide on- and offshore conductor installation services. Our capability ranges from 14" to 36" inch, vertically and up to a limited deviation angle of 3°.

For onshore applications an inhouse engineered mobile installation frame is used to ensure correct installation. It is available in a trailer mounted and containerised version, to suit different installation conditions. The trailer mounted version can be ready for operation within 2 hours after arrival onsite. Both solutions come with accurate hydraulic controls and in combination with high quality theodolites give great control during the installation of conductor. For lifting of conductors in house engineered Balanced Single-Joint Elevators are used, providing a safe and easy way to position the conductor into the installation frame.

In addition to the above Wagenborg Foxdrill uses highly reliable hydraulic impact hammers from IHC. They are equipped with sensors and controls which allow for close manipulation of impact energy and impact frequency. This ensures maximal penetration of the conductor while reducing the risk of damaging the conductor. The hydraulic hammers can yield an impact energy ranging from 2 kNm to 150 kNm (depending on type).

After installation a thorough pile driving report is handed over to the client containing all relevant parameters of the process and conductor.

For offshore applications only a hydraulic hammer and skid mounted powerpack is required. This limits deck space on the rig and transportation costs.

CONDUCTOR INSTALLATION

DRIVEABILITY STUDY AND CONDUCTOR SUPPLY

When required Wagenborg Foxdrill can also arrange a driveability study to provide the client with a thorough understanding of soil conditions and expected achievable penetration of the conductor.

To complete the conductor installation service, the company provides the required conductors as well. Available in a wide variety of diameters and specifications. Wagenborg Foxdrill carries out QC checks on all batches to ensure the client receives top quality conductors. After purchase Wagenborg Foxdrill can weld open or closed drive shoes onto the first conductor. This carried out by experienced and certified welders in our conductor preparation station.

WAGENBORG FOXDRILL

We provide our services with pride. Our history and experience dates back to 1967. Starting out as drilling contractor but reinvented as all round service provider to the oil, gas and renewable industries. Providing a range of services ranging from installation and assembly activities to inspections and maintenance. Our competent team can work in any environment and we live up to any challenge you might have for us. In a cooperative spirit, Wagenborg Foxdrill thoroughly prepares any task and plans for success.

We are client focused and solution driven!

Wagenborg Foxdrill understand the needs of its customers like no other. We translate these into safe and innovative solutions in the field of maintenance, technology and logistics, adding value for our customers. Clarity, trust and respect are our core values.

OTHER SERVICES WE PROVIDE

- Derrick Assembly
- Derrick inspections
- Dropped objects surveys
- Equipment maintenance
- Repair & modifications
- Rig moves
- Rig move Consultancy
- Rig surveys
- Rope access
